PACKAGE NAME

**Apollo ProHealth Regal (Whole
Body) Program (Without ENT+
Dental+ Ophthal)**

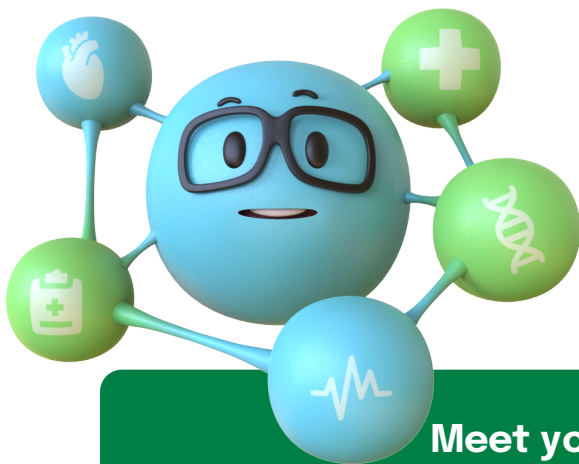

Your health, clearly explained. Actionably designed.

Welcome to your Apollo ProHealth Report – a smarter, more personalized way to understand your health beyond routine test numbers. This report brings together your lab results, vital parameters, lifestyle indicators, and AI-powered risk insights into one easy-to-understand health snapshot. It is designed to help you access, interpret, and act on your health information anytime, anywhere.

Your Physician

Dr. JAYASREE KRISHNAN

For follow-up appointments or queries,
Call 1800 570 1033.

Meet your health companion

Designed to help you connect the dots across your health journey, the health companion is inspired by the interconnected nature of the human body. You will see the health companion throughout the report, as your navigation guide. It will highlight important insights, helpful tips and reminders.

● Complete Health Snapshot

See your overall health profile across key body systems, all organized in one place for easier understanding.

● Highlights what needs attention

Instead of making you scan through every number, the report clearly identifies values that are within range, need monitoring, or require medical review, helping you focus on what matters most.

● AI Powered risk scores*

Advanced predictive models assess your future risk for conditions like cardiovascular disease and prediabetes, enabling earlier action and prevention through lifestyle or medical intervention.

● Trends over time

Your past readings are compared with current values so you can track improvement, spot patterns and make informed decisions with your doctor.

● Personalized Path to Wellness*

The report goes beyond diagnosis by suggesting next steps – including recommended follow-ups, lifestyle improvements and clinical goals tailored to your health profile.

Designed to Empower You

Preventive healthcare works best when information leads to action, and this report is built to support that journey.

Lab parameters needing attention

Blood and Anaemia Profile

Hemoglobin (SLS)

Hemoglobin is a protein found in the red blood cells that carries oxygen to your body's organs and tissues and transports carbon dioxide from the organs and tissues back to the lungs.

Reading

9.6 
gm%

Ref range

12–15
gm%

Packed cell volume (Cumulative Pulse Height Detection)

Packed Cell Volume or Hematocrit is the volume of red blood cells in a unit of blood

Reading

35 
%

Ref range

36–46
%

RBC Count

Red Blood Count is the amount of Red Blood Cells per unit of blood

Reading

5.34 
Million/ul

Ref range

3.8–4.8
Million/ul

MCV

Mean Corpuscular Volume (MCV) is the average volume of the red blood cells in a given sample of blood

Reading

65 
fl

Ref range

83–101
fl

MCH(Calculated)

Mean Corpuscular Hemoglobin (MCH) value refers average amount of hemoglobin present in each red blood cell

Reading

18 
pg

Ref range

27–32
pg

MCHC(Calculated)

Mean Corpuscular Hemoglobin Concentration (MCHC) value refers to the concentration of hemoglobin per unit volume of the red blood cells.

Reading

28 
g/dl

Ref range

31.5–34.5
g/dl

RDW

Red Cell Distribution Width is the measurement of the variation in the red blood cell size and volume

Reading

18.3 
%

Ref range

11.6–14
%

AYNAH128433

Lab parameters needing attention

Glands, Endocrine and Hormonal system

Glycosylated Hemoglobin (HbA1c)

HBA1C indicates the range of glucose that was in the blood for the past 3 months. People who have diabetes need this test regularly to see if their levels are staying within range. It helps to monitor the dosage of anti-diabetic drugs. The A1c test is also used to diagnose diabetes.

Reading

5.9 ▲
%

Ref range

0–5.7
%

Heart/Cardiac System

LDL Cholesterol (Direct LDL)

LDL Cholesterol is also referred to as the "Bad Cholesterol". High levels of LDL increases the risk for heart disease and stroke.

Reading

172 ▲
mg/dL

Ref range

0–130
mg/dL

Total Cholesterol / HDL Cholesterol Ratio (Calculated)

Cholesterol - HDL Ratio depicts the ratio of Good vs bad cholesterol in the body. Higher the value, higher the risk for diseases like heart attack and stroke

Reading

5.4 ▲

Ref range

0–4.5

NON-HDL CHOLESTEROL

HDL Cholesterol is defined as the good cholesterol. The other forms of cholesterol (LDL and VLDL) that are harmful to your body are measured in this test.

Reading

182 ▲
mg/dL

Ref range

0–130

Lab parameters needing attention

Bones & Joints/Skeletal System

Vitamin D Total(25OH vitD3 and 25OH vitD2)

Vitamin D promotes absorption of calcium in the gut and maintains adequate serum calcium and phosphate concentrations to enable normal bone mineralization. Vitamin D is a fat-soluble vitamin that is naturally present in a few foods. It is also produced endogenously when ultraviolet (UV) rays from sunlight strike the skin and trigger vitamin D synthesis. 25-Hydroxy Vitamin D is the major circulatory form of Vitamin D and its level reflects the body store of Vitamin D.

Overall Synopsis & Advice

We have reviewed the results of the tests and have identified some areas for you to act on. Please reach out to your doctor or see a specialist to fully understand any concerns or queries you may still have. We believe that with focus and targeted interventions, you can be healthier and happier.

Executive Summary

Review done on: 18/08/2026

Mrs. PUVIARASI MJ's physical examination and routine tests were within normal limits, except for the findings listed below.

Mrs. PUVIARASI MJ has an old case of chondromalacia, which means wear or softening of the cartilage in the knee area; prediabetes, meaning blood sugar is higher than normal but not in the diabetes range; anemia, meaning low red blood cells or hemoglobin; a mildly positive TMT, which is a treadmill heart stress test; hyperlipidemia, meaning high blood fats such as cholesterol; hypovitaminosis D, meaning low vitamin D; an umbilical hernia, which is a bulge near the belly button; a UTI, which is a urinary tract infection; and mammogram findings of fibroadenoma with calcification, a small fibroadenoma in the left breast, and a small cyst in the left breast, with a Category 2 BIRADS result.

Parameter	Status
LA(es)	3.2 cm

Treadmill Test

A TMT or cardiac stress test measures how well your heart can function under physical stress, including how far it can go before an abnormal rhythm or drop in heart muscle blood flow. Some cardiac conditions are easier to identify when your heart works hard to pump blood throughout your body, such as when you exercise. During TMT, your ECG will be continuously monitored and reflect the presence and severity of blocks in blood and oxygen supply to the heart. Therefore, this test helps diagnose ischemic heart disease, heart valve disease, or heart failure.

Finding

CARDIAC STRESS ANALYSIS IS MILDLY POSITIVE FOR INDUCIBLE MYOCARDIAL ISCHAEMIA AT GOOD WORK LOAD 87% OF MAXIMUM HEART RATE RESPONSE.

Ultrasound Screening Whole Abdomen

Ultrasound of the abdomen helps to look for abnormalities of the abdominal organs like liver, spleen, gall bladder, pancreas, kidneys, uterus, etc.

Finding

Liver measures ~13.0 cm, shows uniform echopattern with no evidence of focal or diffuse pathology. Intra and extra hepatic biliary passages are not dilated.

Gall bladder appears normal with no evidence of calculus. Wall thickness appears normal.

Pancreas appears normal.

Spleen measures ~ 8.5cm and shows normal echotexture.

No evidence of ascites.

Right kidney measures ~ 10.5 x 4.1 cm.

Left kidney measures ~9.9 x 3.8cm.

Both kidneys show normal echopattern with no evidence of calculi or calyceal dilatation.

Urinary bladder is normal in contour. No evidence of focal or diffuse wall thickening no evidence of intraluminal pathology.

LMP: 06.08.2026.

Uterus measures ~10.2 x 3.6 x 4.8 cm and shows normal endometrial and myometrial echoes. Endometrial thickness - 4.4mm.

Right ovary measures ~3.1 x 1.7 cm.

Left ovary measures ~ 3.0 x 1.6cm.

Both ovaries are normal in size and echotexture.

Anterior abdominal wall defect of size ~ 1.2m with herniation of omental fat is seen in umbilical region.

IMPRESSION

- Umbilical hernia with omental fat as content.

*** Suggested clinical correlation and with other investigative findings.

Diagnostic Summary

Renal Profile

This is a panel of blood tests performed to evaluate the state and function of the kidneys. The tests measure various parameters, including minerals, electrolytes, proteins, and glucose, to determine the current health of the kidneys. Physicians use results to screen for kidney disease and assess disease progression, severity, and management.

Examination	Reading		Ref range
Urea	19 mg/dL		13-43 mg/dL
Creatinine - Serum	0.66 mg/dL		0.5-0.9 mg/dL
Trend 			
Uric Acid - Serum	4.4 mg/dL		2.5-6 mg/dL

Electrolytes

Your blood or the fluid in your cells contains electrolytes (also called ions) that carry either a positive or a negative charge. Electrolytes often work synergistically, so medical conditions affecting the concentrations of one or more of these electrolytes may affect the others as well.

Examination	Reading		Ref range
Sodium	141 mEq/L		136-145 mEq/L
Potassium	4.5 mEq/L		3.4-5.1 mEq/L

Electrolytes

Your blood or the fluid in your cells contains electrolytes (also called ions) that carry either a positive or a negative charge. Electrolytes often work synergistically, so medical conditions affecting the concentrations of one or more of these electrolytes may affect the others as well.

Examination	Reading		Ref range
Chloride	104 mEq/L		98-107 mEq/L
CARBON DIOXIDE (CO ₂), TOTAL - SERUM (Kinetic - Photometric)	26 mEq/L		19-29 mEq/L

Urine Examination

Urinalysis, is the physical, chemical and microscopic examination of the urine and is one of the most common methods of medical diagnosis. It is used to detect markers of diabetes, kidney disease, infection etc.

Examination	Reading
Colour:(Visual Examination)	Straw
Transparency:(Visual Examination)	Turbid
Protein :	Nil
Sugar:	Nil
Ketone	Nil
Bilirubin:	Nil
Urobilinogen	Normal
Nitrite (Automated - Reflectance spectrometer)	Negative
RBC	3-5
Pus Cells	7-9
Epithelial Cells	Plenty

Mammography

Mammogram is an X-ray picture of the breast. It is used to screen for breast cancer in women who don't have signs or symptoms of the disease.

Finding

?

* A well circumscribed opacity with multiple coarse macrocalcifications in upper inner quadrant of left breast - On USG correlations corresponds to a fibroadenoma with multiple calcifications.

* Smaller Fibroadenomas in left breast.

* Small cyst in left breast.

(Category -2 BIRADS classification)
